HELP US TO MAKE PROGRESS IN SECONDARY PROGRESSIVE MS

The ASCEND Study, which will investigate the effects of an established relapsing remitting MS treatment on the progression of disability in secondary progressive MS (SPMS), is looking to recruit approximately 856 SPMS patients who:

- are aged between 18 and 58 years
- have had onset of SPMS for at least 2 years
- have an Expanded Disability Status Scale score of between 3.0 and 6.5
- have documented evidence of disease progression that is independent of clinical relapses during the 12 months prior to enrollment
- are natalizumab-naïve.

If you see patients who you think may benefit from participating in ASCEND, please contact:
