

Brain Study Opportunity

Brain Resilience, Aging, and Stress Study (BRASS)

You are invited to participate in a research study about brain function, resilience, and stressful life events. We want to understand how stress affects brain function in older adults, including those with and without post-traumatic stress disorder (PTSD).

*Eligible participants will be compensated.

Participation involves completion of a 15 minute eligibility survey completed online or by phone and a 2 to 3 hour in-person interview. The interview can be conducted at your house or a local library of your choosing.

You may be eligible to participate if you:

- Are 65 years of age or older
- Are located within 30 miles of Lexington
- Could be classified into one of the following three categories:
 - 1) You have no stress symptoms
 - 2) You experience some stress symptoms but have not been diagnosed with PTSD
 - 3) You have been diagnosed with PTSD
